

PLUMBING

Here, you'll learn the basics of installing and repairing plumbing systems water pipes and drains in residential and commercial buildings. Plumbers work inside and outside and must be able to relate to clients/customers. They must also be creative, able to think through problems and recognize that every job is unique.

Coursework includes sketching diagrams, interpreting blueprints, and practicing plumbing assembly. Students learn about state codes and requirements — and get an in-depth look at plumbing systems and their design and installation. Representatives from local plumbing companies and other industry experts address students and offer opportunities for certification in various products on the market today.

JOB OPPORTUNITIES

Plumbers are in great demand, especially in the Triangle, due to the area's growth. Plumbing is a major construction trade and a demanding field. It provides hands-on work for innovative thinkers along with the opportunity to take pride in specialized skills and earn a good income.

14%

PROJECTED JOB GROWTH

Employment of plumbers, pipefitters, and steamfitters is projected to grow 14 percent from 2018 to 2028, much faster than the average for all occupations. New construction and building maintenance and repair should drive demand for these workers, and overall job opportunities are expected to be good.
